

Batch filtering & weighting of Dashboards

04/02/2025 10:43 am EDT

Just below the names of some dashboards, you'll see the *Filter Dashboard* settings. They allow you to apply filters and weighting schemes to all dashlets of a dashboard at once. These are temporary changes to the displayed data. If you wish to permanently alter the segment, weighting scheme, or date filters for a dashlet, please use that dashlet's settings.

The screenshot shows a dashboard interface with a 'Manual Example' title. Below the title is a 'FILTER DASHBOARD' section with three filter controls: 'Segment' (Search Segments), 'Weighting Scheme' (Search Weighting Schemes), and 'Date Options' (All Dates). There are 'Reset' and 'Apply' buttons. Below the filters are three dashlets:

- DASHLET THE FIRST**: This is an example of a comment dashlet. You may use [markdown](#) in a comment dashlet.
- DASHLET THE SECOND**: [What is your parental status? compared with Do you have school-aged children living with you?](#) 699,750 responses. A horizontal bar chart shows 'Parent or Grandparent' with 45% (green) and 20% (blue).
- DASHLET THE THIRD**: [To what broad age group do you belong?](#)
