

# Batch filtering & weighting of dashboards

01/31/2024 1:26 pm EST

Just below the names of some dashboards, you'll see the *Filter Dashboard* settings. They allow you to apply filters and weighting schemes to all dashlets of a dashboard at once. These are temporary changes to the displayed data. If you wish to permanently alter the segment, weighting scheme, or date filters for a dashlet, please use that dashlet's settings.

The screenshot shows a 'Manual Example' dashboard with a 'FILTER DASHBOARD' section. This section includes three filters: 'Segment' (Search Segments), 'Weighting Scheme' (Search Weighting Schemes), and 'Date Options' (All Dates). There are 'Reset' and 'Apply' buttons. Below the filters are three dashlets:

- DASHLET THE FIRST**: A text dashlet with a comment: "This is an example of a comment dashlet. You may use [markdown](#) in a comment dashlet."
- DASHLET THE SECOND**: A chart dashlet titled "What is your parental status? compared with Do you have school-aged children living with you?". It shows 699,750 responses. A horizontal bar chart displays "Parent or Grandparent" with 45% (green) and 20% (blue).
- DASHLET THE THIRD**: A text dashlet with a link: "To what broad age group do you belong?"
