This didn't answer my question

01/31/2024 1:45 pm EST

If you don't get a useful answer to your query, use the *This didn't answer my question* button. Sage generates a new query using ChatGPT and tries the search again. So, if your query was ***get pizza sales in CA 2020***, the new query might be ***get data on pizza sales in the state of California during 2020***. The new search should result in more relevant results.
