Target theme settings

11/09/2026 10:25 am EDT

The target *Settings* > *Theme* tab contains fields designed for styling a target's poll unit. These fields should only be used by those familiar with CSS.

The *Selected Theme* field lets you choose *Published* (the poll unit's current theme) or *Draft*. Draft lets you save settings while you work on a new theme and publish them when you're done. When you use the Draft option, the buttons at the bottom of the page change to *Submit Draft* (the save option), *Publish* (used to replace the currently published theme settings), and *Discard Draft.*

Changes saved to the draft theme can be previewed by appending a `civicscience-widget-draft=1` URL parameter on the publisher's article URL.

The *Font Size* is declared in pixels (px).

Use the *Font Family* field to load[1] any font faces you want to use in styling the poll unit. You can use any Google font. Take care to enclose any multiword font names in quotation marks ("Alike Angular"). If using multiple fonts, the list must be pipe-delimited.

The *Title Text* appears at the top of the poll unit.

The *Title CSS Properties*, *Container CSS Properties*, and *CSS Overrides* fields each require a valid list of newline-separated CSS declarations. The *CSS Overrides* field is particularly powerful, as entries here override all the other styling for the poll unit.

CivicScience Knowledge Base

1. Naming the font face here loads the font, but it will not make any changes. To use the font, you must apply the font to the desired elements of the poll unit in the applicable CSS field.
