The IQPoll WordPress plugin is a module publishers can add to their site(s), enabling them to install the IQPoll widget easily without technical knowledge or code access.

Once installed and activated, the plugin enables you to place the IQPoll anywhere on a WordPress website using a shortcode. You can insert the shortcode [IQPoll] in any editable region of the website.

Note: The plugin may only be used for one instance of the poll unit. If the site requires multiple instances (such as one poll in the sidebar and another in-article), please use one of the other methods of placing the poll unit into your WordPress site .
